

Dr. Nick Hallas, a young assistant professor in northern Florida, takes over the office and laboratory of a departmental colleague who was murdered by his schizophrenic wife of 25 years. Nick's research, aided by undergraduate researcher Andy Culpa, takes off into unexpected areas all of which fail but are linked to the psychiatric literature. A discovery on a lab shelf rattles Nick to the bone and regenerates childhood fears of the "evil eye," while funneling him down through a calamity of mental and physical disasters that threaten his life. Nick becomes involved with a psychic from Cassadaga, Florida who foresees his demise and terrifies him, his family and even the psychiatrist who is treating him. It is an engaging and gripping mystery that unfolds with suspense and intermittent relief as Andy and Nick venture into revealing research projects, attempted murder and a fast paced conclusion that will have you asking if this really did occur.
